

#### **GENERAL GUIDELINES**

#### Do's:-

- Students should be on time for every lecture.
- Students are advised to show due respect to all faculty members.
- Students should keep the Classrooms, Laboratories and Workshops clean and tidy.
- Students must maintain absolute discipline and decorum, while on campus.
- Students should come prepared with algorithm / flowchart / program / procedure for all the experiments before attending the laboratory session.
- Students should bring the data sheets and laboratory records completed in all respects to the laboratory.
- Students are advised to clarify their doubts in the respective courses with the faculty.
- Students have to inform their parents that they should follow up the progress of their wards by being in touch with the institution authorities at regular intervals.
- Students are advised to be present for the mentor meetings conducted by their respective Faculty Advisors, failing which appropriate disciplinary action will be taken.

#### Don'ts:-

- Students are not permitted to attend the class without the identity card, once issued.
- Ragging is strictly prohibited because it is punishable under Karnataka Education Act. Any student involved in ragging, will be severely punished – which includes handing over the case to Police, rustication from the college etc.
- Writing on desks and walls is strictly prohibited, failing which the students will be fined heavily. If the identity of the individual is not established the entire class / students in the block will be fined.
- Students must not use their cell phones during class hours. If any student is found using their cell phone during class hours it will be confiscated.
- Students are not supposed to alter the configuration of the system / any software on the systems.

| 6     | internet                            | Packet Switching   | 19.5      | 19.5         |
| 7     | T1 :Chapter 1                       | Layered architecture- Introduction                                   |           |              |
| 8     | Sec 1.1,Sec 1.2,<br>Sec 1.3,Sec 1.5 | Responsibility and functions of Application layer<br>Transport layer |           |              |
| 9     | Sec 1.8                             | Responsibility and functions of Network layer                        |           |              |
| 10    |                                     | Responsibility and functions of Link layer & Physical layer          |           |              |
| 11    | Unit #2                             | Network applications-Principles                                      |           |              |
| 12    |                                     | The WEB & HTTP- Overview   |           |              |
| 13    | Application layer                   | HTTP Message format  |           |              |
| 14    | T1:                                 | Web caching & Conditional GET  |           |              |
| 15    | Chapter 2                           | <b>DNS</b> - Services  | 19.5      | 39.0         |
| 16    | Sec 2.1                             | DNS Hierarchy  |           |              |
| 17    | Sec 2.2                             | DNS Records  |           |              |
| 18    | Sec 2.5                             | <b>Socket Programming</b> : Creating network applications            |           |              |
| 19    | Sec 2.7                             | Socket programming with UDP  |           |              |
| 20    | Sec 2.8                             | Socket programming with TCP  |           |              |
| 21    | Unit #3                             | Introduction to Transport layer services                             |           |              |
| 22    |                                     | Principles of Reliable data transfer- Stop-N-Wait                    |           |              |
|       | Transport Layer                     | protocol   |           |              |
| 23    | T1:                                 | Sliding window concepts- Go back N protocol                          |           |              |
| 24    | Chapter 3                           | Transmission Control Protocol - Features                             | 15.5      | 54.0         |
| 25    | Sec 3.1                             | TCP Header   |           |              |
| 26    | Sec 3.4                             | TCP Connection Management  |           |              |
| 27    | Sec 3.5                             | TCP Flow control and error control                                   |           |              |
| 28    | Sec 3.7                             | TCP Congestion control   |           |              |
| 29    | Unit #4                             | Internet Protocol- Datagram Format-Fragmentation                     |           |              |
| 30    |                                     | IPV4 addressing – Classless addressing                               |           |              |
| 31    | Network Layer                       | Subnet principles- Forwarding  |           |              |
| 32    | T1:                                 | IPV6 - Features  |           |              |

|    |                     | ( '8 '- )   |       |       |
|----|---------------------|---|-------|-------|
| 33 | Chapter 4           | DHCP  |       |       |
| 34 | Sec 4.4             | NAT   | 23.00 | 77.00 |
| 35 | Sec 4.5             | ICMP  |       |       |
| 36 | Sec 4.6             | IPV6 Header   |       |       |
| 37 |                     | Routing algorithms                                      |       |       |
| 38 |                     | RIP- Distance vector algorithm                          |       |       |
| 39 |                     | OSPF-Link state algorithm                               |       |       |
| 40 |                     | Hierarchical routing-BGP                                |       |       |
|    |                     |   |       |       |
| 41 | Unit #5             | Introduction to link layer                              |       |       |
| 42 |                     | Error detection and correction techniques-Principles    |       |       |
| 43 | Link layer          | Parity, CRC   |       |       |
| 44 | Local Area          | Switched local area network – Building blocks of LAN    |       |       |
| 45 | Networks            | LAN Switch-working principles                           |       |       |
| 46 | T1:                 | Introduction to MAC protocols                           |       |       |
| 47 | Chapter 5           | CSMA/CD   |       |       |
| 48 | Sec 5.1,Sec 5.2,    | VLANs   | 23.00 | 100   |
| 49 | Sec 5.3,Sec 5.3.1,  | Data center networking ( Guest Lecture )                |       |       |
| 50 | Sec 5.3.2,Sec 5.4   | Retrospective : A day in the life of a Web Page request |       |       |
| 51 | Sec 5.4.1,Sec 5.4.3 | All protocols put together                              |       |       |
| 52 | Sec 5.4.4,Sec 5.6   | Consolidation of all the layers                         |       |       |
|    | Sec 5.7             |   |       |       |

## **UE15CS304: Computer Networks Laboratory(0-0-2-0-1)**

| SL.NO | LIST OF PROGRAMS   |  |  |  |  |
|-------|--|--|--|--|--|
| 1)    | Learn and Understand Network Tools   |  |  |  |  |
|       | 1.Wireshark,   |  |  |  |  |
|       | 1.1 Examining an IPv4 Packet Header  |  |  |  |  |
|       | 1.2 Examining an IPv6 Packet Header  |  |  |  |  |
|       | 1.3 Analyse HTTP packet  |  |  |  |  |
|       | 2. TCPDUMP   |  |  |  |  |
|       | <ul><li>2.1 capture packets and try out all the options and record in your observation</li><li>3. PING</li></ul> |  |  |  |  |
|       | <b>3.1</b> Test the connectivity between 2 systems and try all the options                                       |  |  |  |  |
|       | 4.TRACEROUTE   |  |  |  |  |
|       | 4.1 track the packet from source to remote host and try all the options  |  |  |  |  |
|       | 5.NETCAT   |  |  |  |  |
|       | 5.1 Establish communication between client and server  |  |  |  |  |
|       | 5.2 send 100 bytes of data file from client to server  |  |  |  |  |
| 2)    | Use Simulator and Learn Networking: Cisco packet racer   |  |  |  |  |
|       | Excercise1:  |  |  |  |  |
|       | Create simple client server topology and receive the packets from client. try connecting multiple clients        |  |  |  |  |
|       | Excercise2: Create a given topology and perform the following  |  |  |  |  |
|       | 1) ping local networks   |  |  |  |  |
|       | 2) ping across the networks (doesn't work)   |  |  |  |  |
|       | 3) add routing tables  |  |  |  |  |
|       | 4) ping across the networks(it works now because knows the path  |  |  |  |  |
| 3)    | Understand persistent and non-persistent HTTP connections and corresponding                                      |  |  |  |  |
|       | performance impact.  |  |  |  |  |
|       | Create a web page with N (e.g. 10) embedded images. Each image should be of                                      |  |  |  |  |
|       | minimum 2 MB size. Configure your browser (firefox) with following settings (each                                |  |  |  |  |
|       | setting requires repeat of experiment)   |  |  |  |  |
|       | Non persistent connection  |  |  |  |  |
|       | • 2 persistent connections   |  |  |  |  |
|       | • 4 persistent connections   |  |  |  |  |
|       | • 6 persistent connections   |  |  |  |  |

• 10 persistent connections.

**Observation:** Note down the time taken to display the entire page in each of the settings. Ensure that (cache is cleared before starting the web request). Explain the response time differences. What is the optimal number of persistent connections for best performance. Explain your answer.

### 4) Understand working of HTTP headers:

Conditional Get: If-Modified-Since HTTP Cookies: Cookie and Set-Cookie

Authentication: Auth-Basic

Design a web page that has one embedded page (e.g. image) and sets a cookie and enables authentication. You are required to configure the web server (e.g. apache) with authentication mechanism.

Show the behavior of conditional get when embedded objects is modified and when it is not (you can just change the create date of the embedded object). Decode the Basic-Auth header using Base64 mechanism as per the password setup.

**Observation**: Show the behavior of browser when is cookie is set and when cookie is removed.

### 5) Using Cisco packet tracer understand the life of packet in internet.

### Create the following topology in packet tracer.

/---DNS

A - R1 - R2

\--- Web Server

Open the browser in A and access the webserver using sitename (not using IP Address). Traverse each packet (in simulation mode) and answer the following for each packet

Src IP, Dstn IP, Src Mac, Dstn MAC, pkt type (e.g. DNS, ARP, HTTP, TCP) **Observation:** Does the number packets traversed in the network change with second invocation of web request.

## 6) Network programming: Client -Server Socket programming

- using TCP
- 2. using UDP
- 3. multiple clients

### 7) Create an Ipv4 subnet for the given topology

Study the stating routing in a real network.

Establish the network setup as below

R1 and R2 are the desktops with two network interfaces. These interfaces can be obtained by connected USB to Ethernet convertor.

#### **Observation:**

Define MTU at R1 as 800 bytes, and at R2 as 600 bytes. Send 2000 byte UDP packet from A to B. Explain the packet transmission behavior. How many packets are transmitted by A, how many packets are received by B (including fragmentation if any). Did A receive any packets? If so, explain what are those packets and why were they received.

### 8) Create an Ipv6 subnet for the given topology

Study the stating routing in a real network.

Establish the network setup as below

R1 and R2 are the desktops with two network interfaces. These interfaces can be obtained by connected USB to Ethernet convertor.

### 9) Understand ICMP Redirect and implement the following

- 1) ICMP Echo Request/reply
- 2) ICMP Redirect

## 10) Understand TTL Expiry.

Create a network with following topology using USB to Ethernet adaptor on desktops

\ /

\ /

**R3** 

Create a routing loop among R1, R2 and R3 using default route i.e. R1 sends to R2, R2 sends to R3 and R3 sends to R1. Send 1 ICMP packet from A to unknown destination.

**Observation:** Analysis packets routing in the loop and finally generation TTL expiry message. Why is this TTL expiry message does not encounter routing loop. General the ICMP packet with different TTL Value and ensure TTL Expiry is generated by R2 or R3 and not by R1.

### 11) Implementation of OSPF/BGP protocol

Study and configure Link state routing protocol OSPF. Create the given network topology Run OSPF among routers R1, R2, R3 and R4.

**Observation:**Once routing has converged. Start continuous ping from A to B and note down the path. Once ping starts responding, break the link R1-R2 which is being used. Note how much time it takes to converge to new routes by OSPF. When you restore the link back, how much time it takes to restore.

12) Study unknown unicast, broadcast flooding and broadcast storm in L2 network. Create the following network i.e. connects two switches on two ports. A --- S1---S2 --- C

**Observation**: Send one ICMP packet from A to C. Run wireshark on both A and C. Study the packets received. Explain the behavior. Is it broadcast flooding or storm? Now reset the network. Define static ARP entry for C in A. Now send the same single ICMP packet from A to C. What is the behavior change. Explain why. In the above setup (after reset), add another link between S1 and S2. Send the same a series of ICMP packets from A to C. Explain the behavior of network and what happens to responses.

#### 13) Understand SDN

Understand controller functionality in SDN network and using it to change the functionality of network dynamically from hub to a L2 switch.

Create the following topology

Invoke each of the host in its separate window. Invoke from H1 to H2 and run wireshark for each of H1, H2 and H3.

Using controller first configure (or invoke) the controller so that it responds with hub functionality. When the network (Mininet is running), reinvoke the controller with L2 switch functionality.

What is the difference you see between two invocations, especially at H3. Explain.

## **UE15CS305: Introduction to Operating Systems Laboratory (0-0-2-0-1)**

| SL.NO | LIST OF PROGRAMS  |
|-------|---|
| 1     | Execute and familiarize with Linux environment and commands.  |
| 2     | Write a program to create a child process, terminate and get status.  |
| 3     | Write a set of programs to create child process which does computation and returns the result of computation to parent process. |
| 4     | Write a program to implement classical inter process communication problem (Producer – Consumer)                                |
| 5     | Write a program to implement Banker's algorithm for mutual exclusion problem.   |
| 6     | Write program to implement the solution to Diners Philosopher problem.  |
| 7     | Write a program to implement Round Robin scheduling algorithm. Write a program to implement Priority Scheduling algorithm.      |
| 8     | Write a program to implement Shortest-Job-First scheduling algorithm.   |
| 9     | Write a program to implement paging using Best-fit and Worst-fit algorithms.  |
| 10    | Write a program to implement Least Recently Used page replacement algorithm.  |
| 11    | Write a program to implement optimal page replacement algorithm.  |
| 12    | Write a program to implement FCFS/SCAN/C-SCAN disk scheduling algorithms.   |
| 13    | Simulate the inode structure. Implement data in a file through pointers. Support read, write and seek operations.               |
| 14    | Simulate directory structure. Support functions like mkdir, rmdir, mv, ln, rm, ls and touch                                     |

## **UE15CS306: Principles Of Programming Languages Laboratory (0:0:2:0:1)**

| SL.NO | LIST OF PROGRAMS  |
|-------|---|
| 1     | Using debuggers, examine runtime features.  i.Write a sample C program with errors for debugging purpose: Use gdb  ii.Experiment with various options available in gdb (Reference Command list: b, run,  bt, p, c, n, s, quit, help, INTERRUPT, break, finish, untiletc)  iii. Use nm utility and note the observations.  iv. Use ulimit command and note the observations.   |
| 2     | Write C programs to demonstrate following cases for static variables:  File scope Function scope Can the static variable be externed? Declaring the static variable in the header file and examining the behavior in multi ple implementation files Scope of a static variable within a compilation unit External and internal linkages (Note down your observation and conclusion in each case.)  a) Write programs in C to demonstrate the differences between static and global variables. b) Study Name mangling with respect to Variable and Function names in C++. How does extern C linkage prevent name mangling? Demonstrate with suitable code. |
| 3     | Using Valgrind and memcheck tools, check the dynamic memory utilization and memory leaks. (memory profilers)  |
| 4     | Examine assignment operators -  i. in python— list() and sublist(), nested list, copy and deep copy.  ii. in C — Assignment of Structures.  iii. Examine structural and name equivalence in C- typedef.   |

| i | Use Goto statement in a function. Demonstrate the transfer of control within |
|---|--|

- the function.
- ii. Use Goto statement in one function and try to transfer control to another function by defining label in the second function. What is your observation?
- iii. Use Goto statement in one file and try to transfer control to another file by defining label in that file. What is your observation?
- iv. Can you use Goto statement in C to jump into/out of a block? Verify with suitable code.
- v. Non-local goto

Demonstration of Scope of Goto in C,

5

a) Understanding the use of setjmp() and longjmp() in C. Demonstrate the use of setjmp() and longjmp() functions to transfer control from one function to another.

### 6 Variable # of arguments for a function(/method)

- i. in C: Study the macros that are defined in stdarg library. (You can use man stdarg.)
  - a) Study va\_list data type, macros va\_start, va\_arg, va\_end macros for manipulating list of arguments
  - b) Observe and note the parameters needed to pass variable no. Of arguments in C
- ii. In Python, check for
  - a) var. Args,
  - b) Var. Dictionary (key-value pairs)
  - c) Combination of both: Note down the restriction in the usage of these combinations.
- iii. Check the possibility of combining more than one type of values while passing variable no. Arguments in C, Python and Java.
- iv. Are the arguments type checked? Try passing wrong types.
- v. When the parameter passed to a function is an array, should it be considered as variable no. Of arguments? Write your comment on this.

#### 7 Demonstrate

- i. Closures in Python. Also check the following.
  - a) Variable with scope in outer function will be having a read only scope in the inner function. Check this fact, by reading the non local variable, by writing to it (will this be taken as a local variable, when you assign?), try reading the value and then assign a value in the next statement. What would happen, if the variable in the outer scope is a mutable object as a list?
  - b) Try the same things mentioned in the above question on list variable which is mutable object.
  - c) What is non local variable and global variable? Are they same? What is the effect of this on closures?
- ii. Understand the concept of decorators in Python. Decorate the division function written by you with an additional functionality to check for division by zero.
- iii. Demonstrate Callbacks
  - a) In C use any appropriate example.
  - b) In python use any appropriate example.
  - c) Use of Functors in C++
- 8 Demonstrate stack smashing in C.

Is it possible to instruct the C compiler not to look for stack smashing situation? If Yes, how?

- ii. Understand the difference between tail recursion and normal recursion?
- iii. List out the languages that do tail call optimization (TCO) and which do not?
- iv. Write a tail recursive function for factorial computation and string reversal in C.
- v. Try compiling the C program with -O3 option (highest optimization level) and check if it does TCO.

(Hint: compile with -g option, then use objdump -d a.out to look at the disassembly of the compiled code, to see whether the recursive call is taken as a function call or as a jump statement)

- vi. Demonstrate the function call by keyword parameters in python. Can we do the same in C & Java?
- vii. Among C, Python, Java, demonstrate the default parameters?
- Interface and inner classes in Java: show the accessibility of enclosing class members from the enclosed class. Nesting can be implemented as in the following cases. Test the accessibility of members of outer class when they are declared as private or public or final. Test the modifiability of these outer class members from inner class.
  - Using Static nested class
  - Using non-static nested class(inner class)
  - Also demonstrate the declaration and usage of a local class

|    |              | (Aug 17 – Dec 17)   |
|----|--------------|---|
| 10 | Generic Meth | ods in Java.  |
|    | i.           | Illustrate with example how we can print values of different type using a single Generic method |
|    | ii.          | Illustrate use of extends in Java Generic Method declaration (for the generic parameter)        |
|    | iii.         | Demonstrate the use of wild card parameters. Can we define bounded wild card parameter?         |
| 11 | i.           | Demonstrate use of @Override annotation in context of Inheritance in Java                       |
|    | ii.          | Examine usage of final in Java for: variables, classes, methods. Note down your observations.   |
|    | iii.         | Compare private method and final method in Java.  |
|    | iv.          | Demonstrate downcasting in Java/C++. Note down your observations.                               |
|    | V.           | Demonstrate with suitable code, multiple inheritance in Java &Python.                           |
| 12 | Examine and  | observe   |
|    | i.           | The concurrent execution using multithreading.  |
|    | ii.          | Synchronization among multiple threads.   |
